

Assignment – 4

Assignment Date	02.11.2022
Student Name	Sharmila M
Student Roll no	2116191001088
Maximum Marks	2 Marks

1. Pull an Image from docker hub and run it in docker playground.

The screenshot shows the Docker Playground interface. On the left, there's a sidebar with a timer at 03:49:27, a 'CLOSE SESSION' button, and a list of instances showing '192.168.0.8 node1'. The main panel displays the instance details for 'cdp6ide3_cdp6mkf91rrg00a4ekcg', including IP (192.168.0.8), Memory (1.20% / 47.93MiB / 3.906GiB), CPU (0.59%), and an SSH command. Below this, a terminal window shows the following commands and output:

```
WARNING!!!!
This is a sandbox environment. Using personal credentials
is HIGHLY discouraged. Any consequences of doing so are
completely the user's responsibilities.

# The FWD team.
#####
[node1] (local) root@192.168.0.8 ~
$ docker images

Status: Downloaded newer image for hello-world:latest
docker.io/library/hello-world:latest
[node1] (local) root@192.168.0.8 ~
$ docker run hello-world
```

The screenshot shows the Docker Playground interface. On the left, there's a sidebar with a timer at 03:48:27, a 'CLOSE SESSION' button, and a list of instances showing '192.168.0.8 node1'. The main panel displays the instance details for 'cdp6ide3_cdp6mkf91rrg00a4ekcg', including IP (192.168.0.8), Memory (1.23% / 49.09MiB / 3.906GiB), CPU (0.29%), and an SSH command. Below this, a terminal window shows the following output:

```
Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
   (amd64)
3. The Docker daemon created a new container from that image which runs the
   executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which sent it
   to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
https://hub.docker.com/

For more examples and ideas, visit:
https://docs.docker.com/get-started/

[node1] (local) root@192.168.0.8 ~
$
```

2. Create a docker file for the jobportal application and deploy it in Docker desktop application.

```
Command Prompt
Microsoft Windows [Version 10.0.22000.1219]

4. Create a Kubernetes cluster in IBM cloud and deploy helloworld image or jobportal image and also expose the same app to run in nodeport.

The screenshot shows the Kubernetes Dashboard interface. The left sidebar lists various workload types: Cron Jobs, Daemon Sets, Deployments, Jobs, Pods, Replica Sets, Replication Controllers, and Stateful Sets. The main content area displays the 'Workload Status' section with three green circles representing the status of Deployments, Pods, and Replica Sets. Below this, the 'Deployments' table lists the following:

Name	Images	Labels	Pods	Created
flask-app	jobportal	-	5 / 5	11 minutes ago
dashboard-metrics-scraper	kubernetesui/metrics-scraper:v1.0.8	k8s-app: dashboard-metrics-scraper	1 / 1	3 days ago
kubernetes-dashboard	kubernetesui/dashboard:v2.6.1	k8s-app: kubernetes-dashboard	1 / 1	3 days ago

The screenshot shows the Kubernetes Dashboard interface for a specific cluster. The left sidebar lists various workload types: Cron Jobs, Daemon Sets, Deployments, Jobs, Pods, Replica Sets, Replication Controllers, and Stateful Sets. The main content area displays the 'Workload Status' section with three green circles representing the status of Deployments, Pods, and Replica Sets. Below this, the 'Deployments' table lists the following:

Name	Images	Labels	Pods	Created
jobportal	uk.icr.io/ibm_assignments/jobportal	-	3 / 3	2 minutes ago

```
Administrator: Command Prompt
D:\IBM\Assignment 4>ibmcloud ks cluster config --cluster cdpbpbpf0snl81f50hg0
OK
The configuration for cdpbpbpf0snl81f50hg0 was downloaded successfully.

Added context for cdpbpbpf0snl81f50hg0 to the current kubeconfig file.
You can now execute 'kubectl' commands against your cluster. For example, run 'kubectl get nodes'.
If you are accessing the cluster for the first time, 'kubectl' commands might fail for a few seconds while RBAC synchronizes.
